

## **[FORESIGHT SPORTS RELEASE ULTIMATE COACHING AND FITTING PLATFORM - FSX PRO]**

[Foresight Sports](#), the leading launch monitor and simulator brand, has launched its revolutionary new coaching, fitting and game analysis software platform, [FSX Pro](#).

FSX Pro is the ultimate performance insight tool for the game's best players, coaches, and club fitters.

The new FSX Pro software is an addition to the company's existing simulation software platform FSX 2020 and has been designed to provide users with total analysis in as much depth as they desire.

The completely customisable tagging features mean that coaches, fitters and players can now easily dial in on the finest details of club set-up, swing changes and game improvement. Detailed reports can be generated to summarise everything into a concise, email-friendly format.

With its simple, intuitive design, FSX Pro lets users create and edit new players and sessions faster and easier than ever before. That means more time doing what they do best.

The initial software release is the PC version compatible with the GCQuad and GCHawk. The iPad version and GC2/HMT compatibility are expected to follow shortly after on February 10<sup>th</sup> 2021.

FSX Pro is available now as a completely [free download](#) for everyone with an existing FSX 2020 software licence. Each user will receive 2 FSX Pro licences for every FSX 2020 licence they own. These can be split across PC and iPad or twice on the same type of device as required.

Anyone who is not currently working with a Foresight Sports Launch Monitor or the FSX 2020 software should speak with a Foresight Sports product expert for more information on how they can maximise their business or transform their game.
